

Agentic system

a single deployed system may consume any or all three signals

Language as Grounding Signal

defines the task: goals,
states, actions, rewards

*"You are in a room
with two doors."*

Language as Deliberative Feedback

refines behavior at inference
time, no parameter updates

*"Step 3 has an error;
try dividing by 2, not 4."*

Language as Learning Signal

shapes parameters
at training time

*"Response A is
better than B."*
